LOCATION

AKTAU, KAZAKHSTAN / 2019

EOUIPMENT

BOILER WATER

APPLICATION

HEATING SYSTEM, DRINKING, AND PROCESS WATER

PROVEN RESULTS

SUCCESSFUL TEST:

0% IRON FOUND IN MUNICIPAL WATER AFTER FILTRATION

CHALLENGE

Process water in Kazakhstan is used for citizens' day-to-day use, including drinking and bathing. Traditional filtration is unable to adequately clean the particulate under 10 microns causing corrosion build up in pipelines and reservoirs. The government's annual expenditure in operating costs for boiler management is in excess of \$100 million USD.

SOLUTION

Test OEI magnetic filter scrubbers in various locations in the cities of Aktau and Uralsk to:

- » Reduce ferrous and non-ferrous contamination.
- » Improve boiler water and chiller water cleanliness.
- » Reduce conventional filter replacement.
- » Protect water system components from wear, contamination and corrosion.
- » Compare filtration efficiency against competitor magnetic filtration solutions.

PRODUCT RECOMMENDATION

MAGNETIC FILTER SCRUBBER

RESULTS

The magnetic filters collected significant amounts of contamination that were for testing; analysis results demonstrated a dramatic decrease of iron, magnesium and other harmful elements.

The government of Kazakhstan is planning to install OEI magnetic filters statewide on major water infrastructure including pipelines, buildings, and other locations.

Test protocol #35 from <u>16.04.2019</u>. Registration No. 1206, 1207

Registration No. 1206, 1207

Submitter: AO Zhaiykteploenerso
Testing sample: drinking water
Sampling site: Molenkuli str. 101
Sampling report: No. 68 from 15.04.2019.
Sampling date: 15.04.2019.
Sampling date: 15.04.2019. end 16.04.2019.
Measuring tool: ANION 4100 (pH analyzer) certificate No. BK-09-2467 (valid until 12.10.2019), spectrophotometer ID-5400BM certificate No. BK-11-0071 (valid until 12.10.2019), fluorat 02-2M certificate No. BK-09-2466 (valid until 12.10.2019), Testing conditions: temperature 25.8 °C; humidity 65.0 %.

Chemical test

Identified	Testing method	Unit of	Actual concentration	
component	reference	measurement	before the filter	after the filter
	document		No. 1206	No. 1207
Total hardness	GOST 4151-72	mol/m ³	5,9	5,7
Calcium	GOST 23268.5-78	mg/dm³	76,15	70,14
Magnesium	GOST 23268.5-78	mg/dm³	25,53	26,75
Chlorides	GOST 4245-72	mg/dm³	124,0	124,0
Turbidity	GOST 3351-74	mg/dm³	1,24	1,18
Total iron	GOST 4011-72	mg/dm³	0,081	Not found
