

## CASE STUDY

### CUSTOMER

**SUREFIRE INDUSTRIES**

### LOCATION

**CALGARY, AB CANADA / 2008**

### EQUIPMENT

**SCHLUMBERGER CEMENTER**

### APPLICATION

**HYDRAULIC RESERVOIR**

### PROVEN RESULTS

**EXTENDED OPERATIONAL CYCLES**

**REDUCED MAINTENANCE COSTS**

### CHALLENGE

Ferrous contamination from manufacturing process.

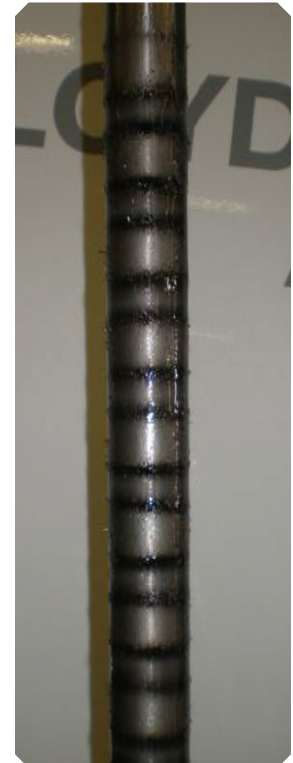

### SOLUTION

Install an OEI magnetic filter element in the reservoir.

### RESULTS

Surefire was tasked to refit a Schlumberger Cementer with a new hydraulic system. Photos display a significant amount of ferrous contamination the regular filters missed after just 2 hours of operation.

Surefire designs OEI filters into every piece of equipment it manufactures: Coil Tube rigs, N2 Pumpers and Frac Units. They also have application in Wire Line Trucks, Flush by Trucks, Work Over Rigs, Heli Portable Rigs, Casing Rigs, Mud Pumps and Cementers. Operating in isolated locations these units cannot afford to be down.

**PRODUCT RECOMMENDATION**  
**MAGNETIC FILTER ELEMENT**
