CONTROL PANELS

“This unit is used to flush systems to the NAS requirements specified by customers anywhere from a NAS 6 to a NAS 8 depending on the system and how it's being used. We have found that by using the OEI Magnetic Scrubber we are able to see that our filter elements last longer and we are able to get the fluid cleaner quicker”

- Matt Nowak, Sr. Production Coordinator

CHALLENGE

Finite contamination that occurs during break in of new systems which cannot be captured by traditional filtration. These systems are manufactured in 316 Stainless Steel.

SOLUTION

Install an OEI magnetic filter scrubber.

RESULTS

Photos show the contamination captured by the OEI magnetic filter. When analyzed most of these particles are sized to submicron, if these particles are left in the system they will cause premature wear.
